Professional Summary

Senior backend engineer with eight years building and operating large-scale distributed systems. Strong across system design, cloud infrastructure, and full-cycle DevOps. Outside work, I heavily invested in agentic AI tooling: parallel developer agents and LLM-driven workflows.

Selected Projects

Dirigent

— Parallel AI agent orchestrator

LangGraph pipeline that decomposes a goal into atomic PRs, spawns parallel developer agents in isolated git worktrees, reviews and selects the best implementation, then delivers a draft PR via a short-lived integration branch.

Stack: Python · LangGraph · LangChain · Git Worktrees · GitHub Copilot API

Matkorgen

— MCP server for LLM-driven grocery shopping

MCP server that lets LLMs search products, manage a cart, and check out against ICA's online store via headless browser automation and REST APIs — wrapping an arbitrary web UI where no public API exists.

Stack: TypeScript · MCP SDK · Playwright · Zod

Work Experience

IKEA – Senior Software Engineer (2023–Present) — Malmö

Financial Services

- Designed and shipped a global BNPL self-service platform with per-market configuration, enabling financial product rollout across multiple markets.
- Built and operated backend services in Go and TypeScript for ingestion, transformation, and orchestration workflows on GCP.
- Introduced end-to-end OpenTelemetry tracing and metrics across services, cutting mean time-to-diagnosis on incidents.
- Automated commit-to-production pipeline with zero manual promotion steps and regression gates on every merge.
- Led hiring and mentorship initiatives to grow engineering capability.

Stack: Go, TypeScript, SQL, Bash, GCP (Cloud Run, Pub/Sub, BigQuery), Terraform, GitHub Actions, OpenTelemetry, REST

IKEA – Software Engineer (2021–2023) — Malmö

Checkout / Cart

- Re-architected cart runtime and DevOps stack onto GKE and Terraform, improving reliability and deployment cadence for global checkout flows.
- Built high-throughput Go APIs handling checkout at IKEA scale.
- Established observability stack from scratch: traces, dashboards, SLIs/SLOs, alerting, and DORA measurements.
- Participated in on-call rotation and led disaster recovery exercises.

Stack: Go, SQL, Bash, Kubernetes (GKE), Terraform, Redis, Spanner, GCP, AWS, GitHub Actions, GraphQL

Advinans – Software Engineer (2020) – Remote

- Extended backend services and cloud infrastructure for a robo-advisory investment platform.

Stack: TypeScript/Node.js, Terraform, AWS

Funnel – Software Engineer (2019–2020) – Stockholm

- Built HubSpot and Salesforce CRM integrations and maintained ETL pipelines.

Stack: Python, AWS, Grafana

Accenture – Consultant (2018–2019) – Stockholm

- Delivered cloud transformation work for an enterprise client on GCP and AWS.

Stack: Python, AWS, GCP

Chrysopeia OÜ – Owner (2017–2019)

- Built an automated trading system covering data processing, backtesting, and cloud deployment.

Stack: Python, GCP

Education

- **M.Sc. Cognitive Science** (incomplete) — Lund University
 - **B.Sc. Computer Science** — Kristianstad University
-

Technical Skills

Languages: Go, Python, TypeScript, Bash, SQL, HCL

Infrastructure: Kubernetes, Terraform, Docker, Redis, Spanner, BigQuery, Cloud Storage, Cloud Run, Pub/Sub, OpenTelemetry

Cloud: GCP (primary), AWS

Interests: Agentic AI systems, LLM tooling, MCP, developer experience
